

Seamless Desk Lite

The Biometric Manual Counter Solution:
The combination of high-quality face image capture with optimised footprint.

The **Seamless Desk Lite** provides any manual booth with high-quality face image capture capabilities. It combines automatic camera height adjustment with a smart illumination system, enabling the capture of full-frontal face images in a fast and user-friendly way.

Its modern design and compact footprint provide installation flexibility at any counter.

High-quality face image

The Seamless Desk Lite face capture system encloses a mechanism that automatically adjusts the position of the camera according to the user height, and the intensity of the illumination quadrants according to the environmental light conditions. It also contains interactive elements that further enhance both the user experience (smart LED ring around the camera), and the officer experience (status LED at the top of the unit).

The Seamless Desk Lite captures high-quality face images in compliance with the most challenging requirements in the Border Control and Identity Management markets such as the ISO/IEC 19794-5:2011 frontal type face image format.

Compact form-factor, flexible installation

The Seamless Desk Lite is a game-changer in the world of infrastructure installation. Its unique design allows for simple and hassle-free installation into any existing infrastructure, regardless of configuration or dimensions. With the ability to be installed directly onto the wall of a manual booth, the Seamless Desk Lite offers unparalleled flexibility and convenience. Additionally, its streamlined design ensures that the face capture module doesn't obstruct the officer's view, providing enhanced security and user experience.

Simplified integration

The Seamless Desk Lite is provided with an SDK that allows any customer application to communicate with the device as a single logical device. The SDK provides the solution operator with full control over the equipment, enabling all relevant commands, such as starting the face capture process and collecting the respective images in compliance with the defined quality settings.
