

## Seamless Desk®

### The Biometric Manual Counter Solution:

The combination of high-quality biometrics capture with footprint optimisation.

The **Seamless Desk®** provides any manual booth with the capability of high-quality face capture, enabling fast identification and enrolment in the highest level of security available with its automatic camera height adjustment, and full-frontal capture.

It combines biometric quality excellence with a new and modern design that optimises the footprint and gives the flexibility to allow its installation on any check-in counter.

## Flexible installation method

One of the most unique characteristics of the Seamless Desk® design is the simplified installation on existing infrastructures, regardless of their configuration and dimensions. The Seamless Desk® can be installed directly on the wall of a manual booth, on top of a desk, or floor mounted.

## Compact form factor

Given its reduced form factor, the Seamless Desk® face capture module does not block the view of the officer over the area where the traveller is waiting. The Seamless Desk® can also be installed at different heights, allowing to adapt the face capture height range to the characteristics of the target users (e.g., a manual booth dedicated to travellers with reduced mobility or families with children can have a Seamless Desk® installed on a lower position, for an enhanced user experience).

## Full control for Airport and Airline management

The Seamless Desk® integrates with our Vision-Box Seamless Journey Platform® taking advantage of its business process orchestration features, such as the business rules management, integration with external systems, data security and privacy.
